KOMATSU

PC290LC-11/PC290LCi-11

Hydraulic excavator

Net horsepower
196 HP (147 kW) @ 2,050 rpm

Operating weight
70,702–72,091 lbs. (32,070-32,700 kg)

Bucket capacity
0.76-2.13 yd^3 (0.58-1.63 m^3)

intelligent MACHINE CONTROL 2.0

Give your operators the power of advanced automation

Innovation

Performance

Efficiency

Command the latest technology with iMC 2.0

Empower your operators to work more efficiently than they ever could with conventional aftermarket machine guidance or manual operation. The PC290LCi-11 with intelligent Machine Control (iMC) offers the capability to work smart, from rough digging to finish grading. Incorporating a host of advanced, proprietary machine technology, iMC puts sophisticated, productivity-enhancing automation and cutting-edge job site design at your command.

- Semi-automatic for trenching, slope work and high production applications
- Minimize over-excavation and make every pass count

Perform finish grading using only arm input

Your operators can finish grade quickly and accurately with a bucket angle hold control that automatically holds the bucket angle to the design surface during arm operation, enabling operators to perform finish grading using only arm input.

Auto tilt bucket control

Auto tilt bucket control assists the operator in aligning the bucket parallel with the slope, so that finish grading can be accomplished without having to align the machine with the target surface.

Quick specs

- Weight: 70,702-72,091 lbs. (32,070-32,700 kg)
- Horsepower: 196 HP @ 2,050 rpm (147 kW @ 2,050 rpm)
- Bucket capacity: 0.76-2.13 yd^3 (0.58-1.63 m^3)

KOMATSU

Make every pass count

Improve your efficiency

iMC means fast excavation to finish grade.

Semi-automatic operation

New features such as bucket angle hold control provide high levels of accuracy and comfort.

Innovative

- Achieve highly accurate results with the iMC excavator's semi-automatic operation of work equipment
- Compact 10.4-in (26.4-cm) iMC monitor with increased memory capacity, processing speed, and pinch-to-zoom capability

Integrated

- Operators can focus on moving material efficiently with a factory-installed 3D and guidance system designed for the machine – no more "bolt-on" components. The fully integrated package comes with stroke sensing hydraulic cylinders, a multiple global navigation satellite system (multi-GNSS) and an inertial measurement unit (IMU) sensor
- Advance job site flexibility with multi-band UHF/915SS radio
- Fast, reliable job site connectivity with 4G LTE connectivity

Intelligent

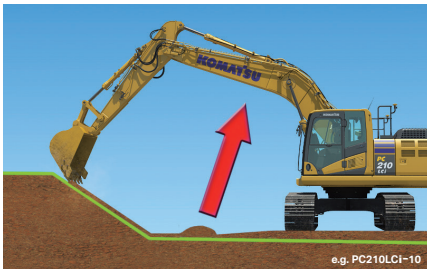
- Operators can focus on moving material efficiently and limiting over-excavation by semi-automatically tracing the target surface
- Excellent ease of operation and bucket positioning with intelligent facing compass, light bar and sound guidance
- Outstanding efficiency, productivity and ease of operation with bucket angle hold control

Photo may include optional equipment.

intelligent Machine Control

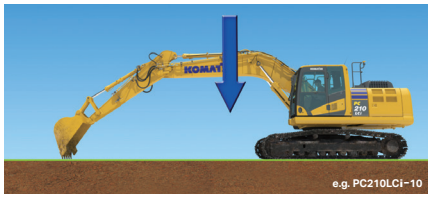
Over-excavation and damage to the design surface are minimized with Komatsu's unique sensor package, which includes stroke sensing hydraulic cylinders, an IMU sensor, and GNSS antennas. It utilizes 3D design data loaded in the control box to accurately check its position against the target. If the bucket hits the target surface, it is semi-automatically limited to minimize over-excavation.

If the operator turns off Auto mode, the machine can be operated with highly accurate, responsive machine guidance, with the machine only providing indication guidance.



Auto grade assist

With the auto grade assist function, the operator moves the arm, the boom adjusts the bucket height automatically, tracing the target surface and minimizing digging too deep. This allows the operator to perform rough digging without worrying about the design surface, and to perform fine digging by operating the arm lever only. The working range is extended by holding the lever to move the boom downward.



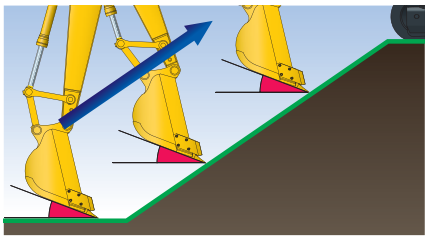
Auto stop control

During boom or bucket operation, the work equipment automatically stops when the bucket edge reaches the design surface, thus minimizing damage to the design surface.

Minimum distance control

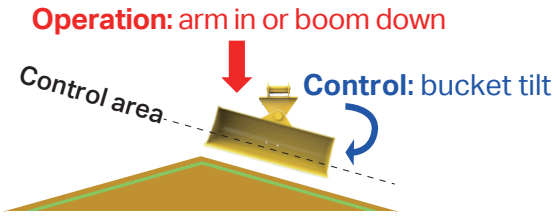
The intelligent Machine Control excavator controls the bucket by automatically selecting the point on the bucket closest to the target surface. Should the machine not be facing a sloped surface at a right angle, it will still follow the target surface and minimize digging below it.

intelligent Machine Control (iMC)



Bucket angle hold control

Operator sets desired bucket angle and the system automatically maintains bucket angle throughout the grading pass. Angle hold control increases ease of operation and improves final grading accuracy.



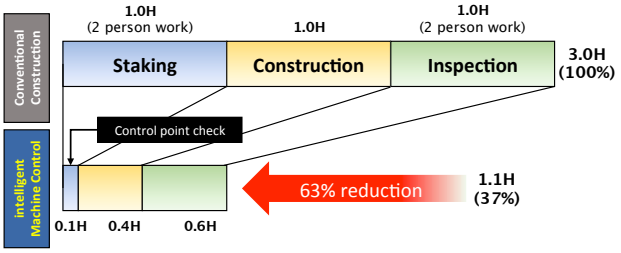
Auto tilt control

Automatically tilts bucket to design surface and returns it to horizontal to unload. Using auto tilt control with the existing minimum distance control and auto grade assist makes complex grading quicker and easier.

Improved construction efficiency

Staking, survey and final inspection (which is usually done manually), can be reduced with the intelligent Machine Control excavator by setting 3D design data on the control box. Also, use of the facing angle compass can minimize leveling work for the surface on which the machine sits. Even if the machine is inclined while working, the facing angle compass allows the operator to ensure that the machine is facing perpendicular to the target surface. The intelligent Machine Control technology allows the operator to improve work efficiency (i.e. shorter construction time) while minimizing over-excavating the target surface from rough digging to finish grading.

Comparison of construction time based on in-house test of excavation and grading slope surface*

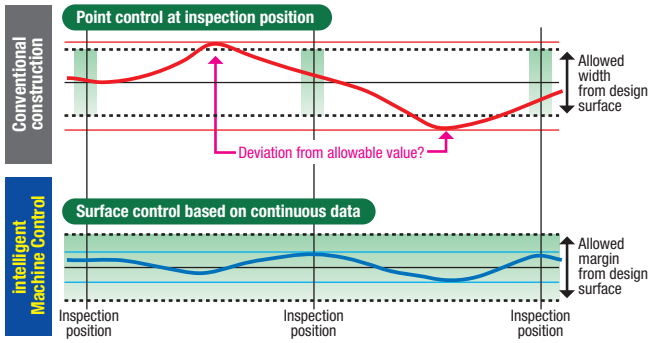


* When used by a qualified iMC operator, the Komatsu intelligent Machine Control system increases construction efficiency.
* The above data does not include design time or working data creation time. The above data is based on in-house construction tests, performed by Komatsu, whose conditions may differ from actual construction.

Improved work accuracy

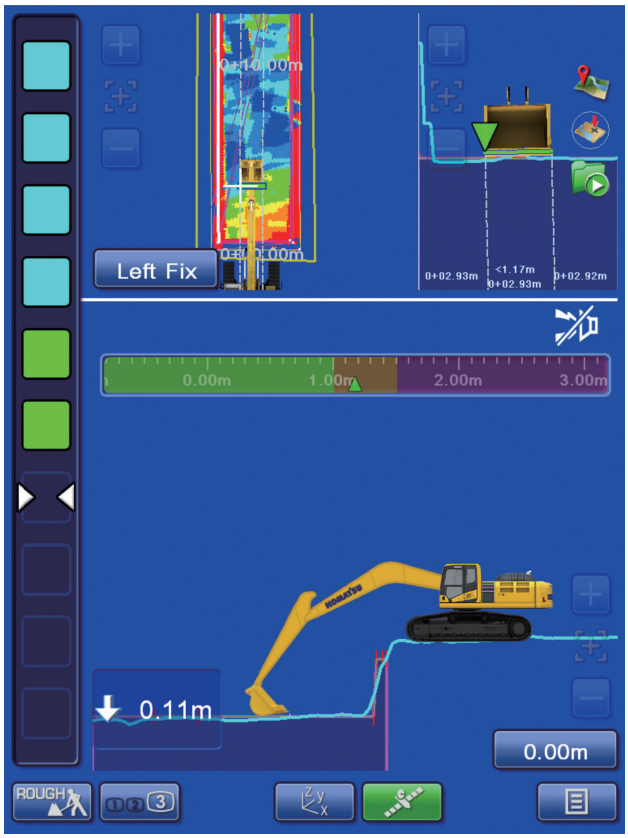
The bucket edge/tip position is instantly displayed on the control box, eliminating the wait time for display on the monitor during construction. The large and easy-to-view control box displays information clearly, aiding in highly accurate work. With manual operation and conventional machine guidance, finish grade quality and excavating accurately depends heavily on the skill of the operator. With the intelligent Machine Control excavator, the bucket is automatically limited to follow the target grade without over-excavating.

Relationship between finished surface and allowable value



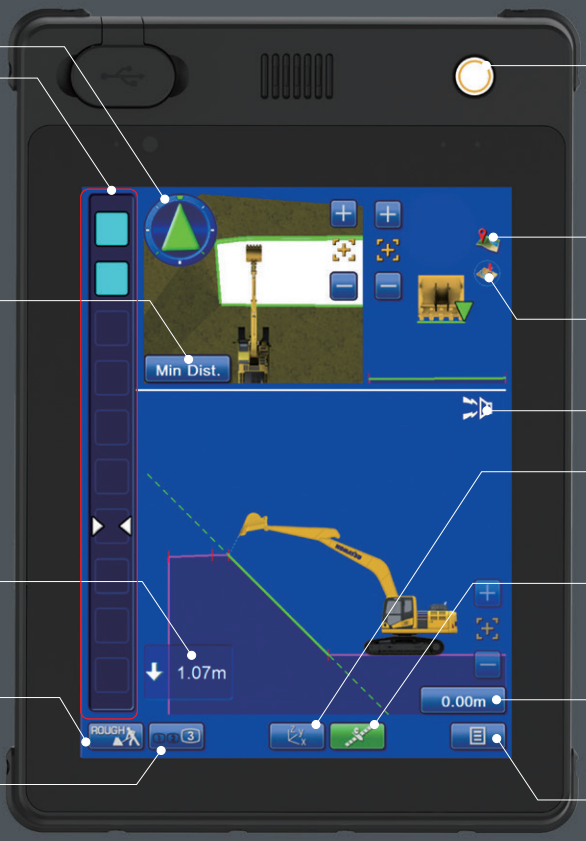
As-built surface mapping

Operator can display and check the as-built status and find where to cut and fill.



Control box

The monitor of the Komatsu intelligent Machine Control (control box) uses a compact 10.4-in (26.4-cm) screen screen for visibility and ease of use. The simple screen layout displays the necessary information in an easily understood fashion. Touch screen icon interface instead of multi-step menu simplifies operation.



Facing angle compass

Light bar

Bucket edge position selection button
Used to select the bucket edge position (left/middle/right/minimum distance) to determine the distance from the design surface

Distance from design surface

Mode selection button
Driving, rough digging, and fine digging modes

Screen selection button
Use to change the screen layout

Auto/Manual switch

Pop-up map button
Displays a wide-area map

Edge position recording button

Sound guidance On/Off

Bucket edge position check button

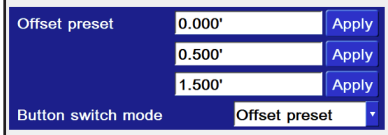
GNSS signal reception status check button
Used to check signal reception from the GNSS

Design surface offset
The design surface can be offset in the vertical direction

Main menu button
For various settings

Preset elevation offset quick button

Pre-determined offsets can be stored in the monitor to allow an operator to easily switch between preset grades.



Quick bucket swap button

Allows users to quickly swap between various buckets without having to enter main menu. This lessens the time a user takes to change out a bucket on the monitor.

Machine navigation

Facing angle compass

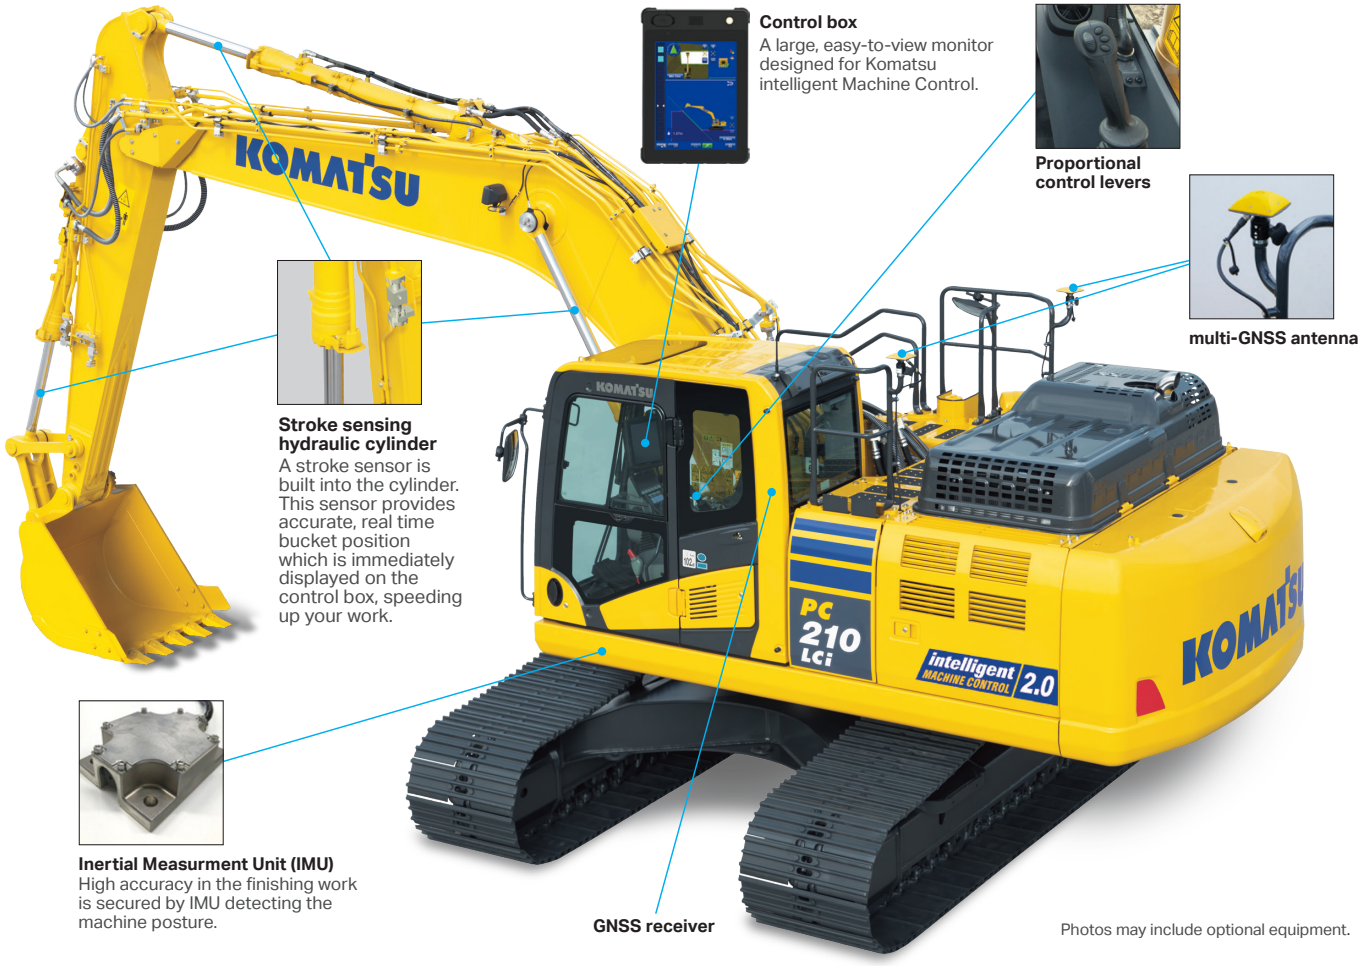
The orientation and color of the facing angle compass's arrow shows the operator the facing angle of the bucket edge relative to the target surface. This allows the bucket edge to be accurately positioned square with the target surface, which is useful when finishing slopes.

Enhanced operability of the machine control

Semi-auto/manual mode switching and design surface offset function can be operated with switches on the control levers.

intelligent Machine Control (iMC)

Factory-installed Komatsu intelligent Machine Control components



Control box
A large, easy-to-view monitor designed for Komatsu intelligent Machine Control.

Proportional control levers

multi-GNSS antenna

Stroke sensing hydraulic cylinder
A stroke sensor is built into the cylinder. This sensor provides accurate, real time bucket position which is immediately displayed on the control box, speeding up your work.

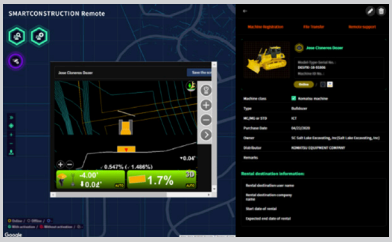
Inertial Measurment Unit (IMU)
High accuracy in the finishing work is secured by IMU detecting the machine posture.

GNSS receiver

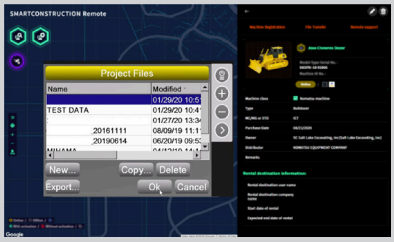
Photos may include optional equipment.

SMARTCONSTRUCTION
Remote

Customers can quickly send design files to intelligent machines and provide support to operators



Users can log in to Smart Construction Remote, locate machines by job site to upload or download design files at any time.



View the machine monitor to troubleshoot or add new files in the machine without the time requirements of traditional methods.

Capable of connecting to mixed fleet customers.

View or navigate machine monitor live with operator.

Working smarter in every way

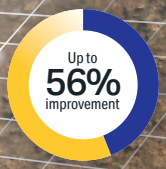
Benefits of iMC 2.0

Save money

Frees GPS dozer from need to achieve final grade so it can work elsewhere on the site.

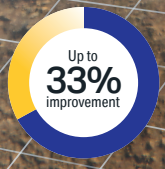
Save time

Reduce staking, grading and inspection with 3D design data and semi-automatic grading.



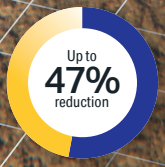
Less time grade checking

Monitor performance and stay on grade from the cab: operators spend time working, not grade checking.



Improve accuracy

Continuously monitor grade and semi-automatics to dig precisely to grade.



Reduce base aggregate

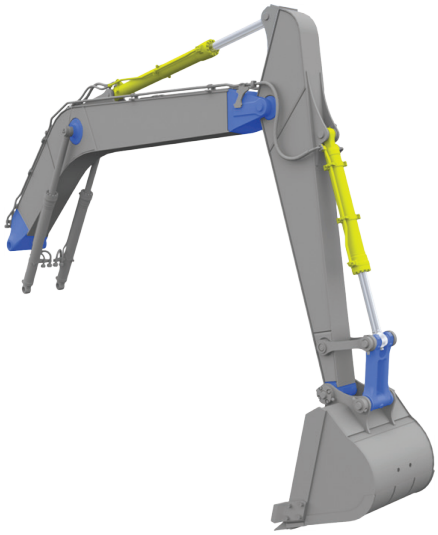
Greatly reduce over-digging and the amount of costly base aggregate needed for applications like utilities.

**All savings, improvements, and reductions are compared to traditional grading methods.*

Performance features

High rigidity work equipment

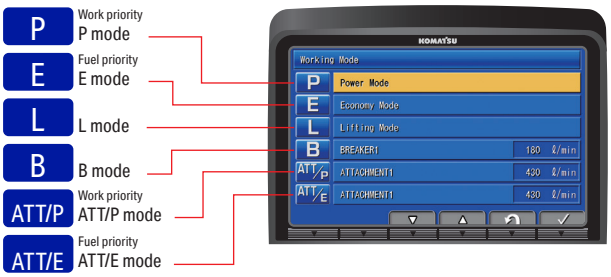
Designed for long-term durability and reliability, with booms and arms constructed with thick plates of high tensile strength steel. In addition, these structures are designed with large cross-sectional areas and large one-piece castings in the boom foot, the boom tip and the arm tip. A standard HD book design provides increased strength and reliability.



Working mode selection

The PC290LC/LCi-11 excavator is equipped with six working modes (P, E, L, B, ATT/P and ATT/E). Each mode is designed to match engine speed, pump flow, and system pressure to the application. The PC290LC/LCi-11 features an attachment mode (ATT/E) that allows operators to run attachments while in Economy mode.

Working mode	Application	Advantage
P	Power mode	• Maximum production/power • Fast cycle times
E	Economy mode	• Good cycle times • Better fuel economy
L	Lifting mode	• Increases hydraulic pressure
B	Breaker mode	• Optimum engine rpm, hydraulic flow
ATT/P	Attachment Power mode	• Optimum engine rpm, hydraulic flow, 2-way • Power mode
ATT/E	Attachment Economy mode	• Optimum engine rpm, hydraulic flow, 2-way • Economy mode



Increased work efficiency

Functional digging force can be increased with use of the one-touch Power Max. function (up to 8.5 seconds of operation).

Maximum arm crowd force (ISO)

12.6 t (124 kN) 13.6 t (133 kN) (with Power Max.) 7% UP

Maximum bucket digging force (ISO)

12.6 t (124 kN) 13.6 t (133 kN) (with Power Max.) 7% UP

Measured with Power Max. function, 126 in (3,200 mm) arm and ISO rating

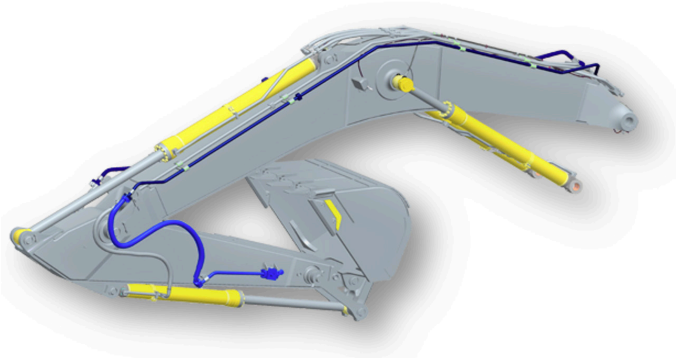
Komatsu-integrated attachment control (optional)

Factory-integrated auxiliary hydraulic attachment control with programmable pressure and flow settings for up to 15 different tools. Settings can be easily changed from the machine monitor optimizing attachment control and performance. Proportional joysticks help expand versatility by giving the operator precise hydraulic attachment control.

*Not available on PC210LC-11

+1 Attachment piping (optional)

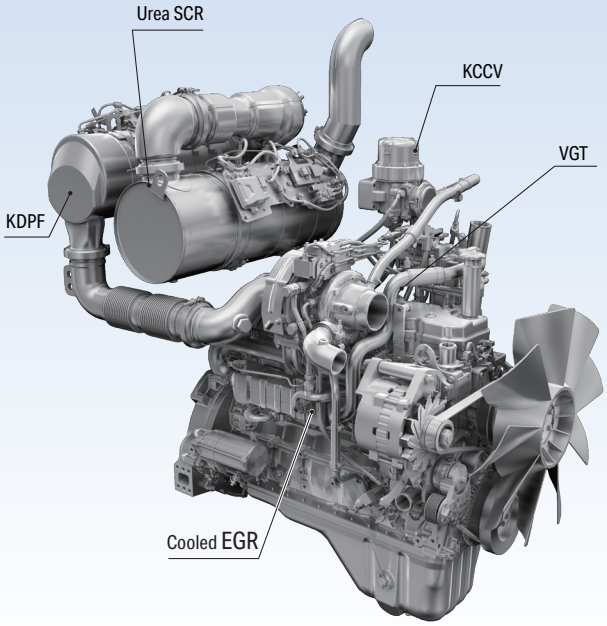
Factory-engineered auxiliary attachment circuit piping is designed and sized to work efficiently with the excavator main hydraulic system. Constructed of large diameter steel tubing with four bolt flange connections and robust mounting points, the auxiliary hydraulic piping is designed for durable, reliable use.



Komatsu innovative engine technology

Latest tier 4 final engine

The Komatsu SAA6D107E-3 engine is EPA Tier 4 Final emissions certified and provides exceptional performance and efficiency. Based on Komatsu proprietary technologies developed over many years, this new diesel engine reduces nitrogenoxides (NOx) by more than 80% when compared to Tier 4 interim levels. Through the in-house development and prodution of engines, electronics, and hydraulic components, Komatsu has achieved great advancements in technology, providing high levels of performance and efficiency in virtually all applications.



Working environment

Photo may include optional equipment. PC210LCi-11 shown.

Comfortable working space

Wide, spacious cabin

The cabin includes a seat with reclining backrests and a pull-up lever to easily adjust seat height and tilt angle. You can set the appropriate operational posture of armrest together with the console. Reclining the seat further enables you to place it into the fully flat state with the headrest attached.

Arm rest with simple height adjustment function

The addition of a knob and a plunger to the armrest permits the height of the armrest to be easily adjusted without the use of tools.

Low vibration with cab damper mounting

Automatic climate control

Pressurized cab

Auxiliary input jack

Connecting a regular audio device to the auxiliary jack allows the operator to hear the sound from the speakers installed in the cab.

Standard equipment

Sliding window glass (left side)

ISO/BH pattern change valve

Remote intermittent wiper with windshield washer

Easy-to-access AC controls

Opening and closing skylight

Magazine box and cup holder

Defroster (conforms to the ISO standard)

One-touch storable front window lower glass

General features

ROPS cab structure

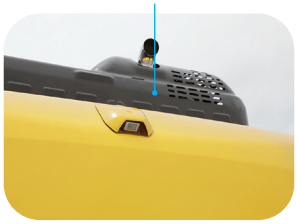
ISO 12117-2

The machine is equipped with a ROPS cab that conforms to ISO 12117-2 for excavators as standard equipment. It also satisfies the requiremets for level 1 Operator Protective Guard (OPG) and top guard (ISO 10262).

Rearview monitoring system

A rearview monitoring system display has a rearview camera image that is continuously displayed together with the gauges and important vehicle information. This enables the operator to carry out work while easily cecking the surrounding area.

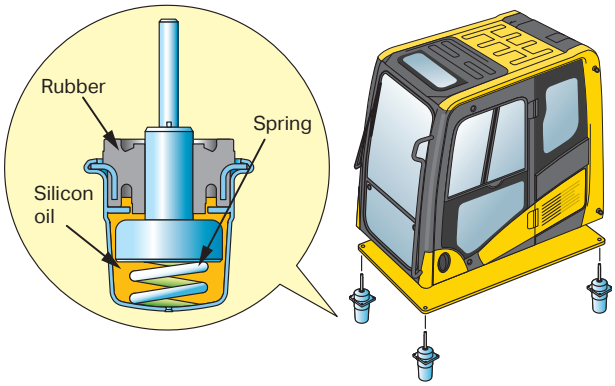
Rearview camera



Rearview image on monitor

Low vibration with viscous cab mounts

The PC290LC-11 uses viscous mounts for the cab that incorporate a longer stroke and the additionn of a spring. The cab damper mounting combined with a high rigidity deck reduces vibration at the operator's seat.



General features

Secondary engine shutdown switch at base of seat to shutdown the engine.

Left and right side handrails

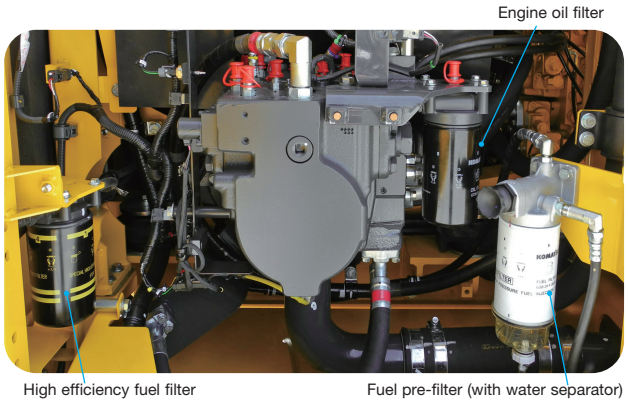
Seat belt caution indicator

- Lock lever
- Seat belt retractable
- Tempered and tinted glass
- Large mirrors
- Slip-resistant plates
- Thermal and fan guards
- Pump/engine room partition
- Travel alarm
- Large cab entrance step
- Large, easy-open hood for engine and aftertreatment access

Maintenance features

Centralized engine check points

Locations of the engine oil check and filters are integrated into one side to allow easy maintenance and service.



Tie off points standard (ISO 14567)

When working in elevated positions on the boom and track frame tie off points provide anchors for technician harness lanyards.

Easy cleaning of cooling unit

Fuel pre-filter with water separator

High efficiency primary fuel filter

Easy access to engine oil filter, engine oil, drain valve, fuel drain valve and water separator drain valve

Easy-to-access air conditioner filter

Washable cab floormat

Sloping track frame

Utility space

PC290LC-11 shown above.

Long-life oils, filters

High-performance filters are used in the hydraulic circuit and engine. By increasing the oil and filter replacement intervals, maintenance costs can be significantly reduced.

Hydraulic oil filter
(Ecology white element)

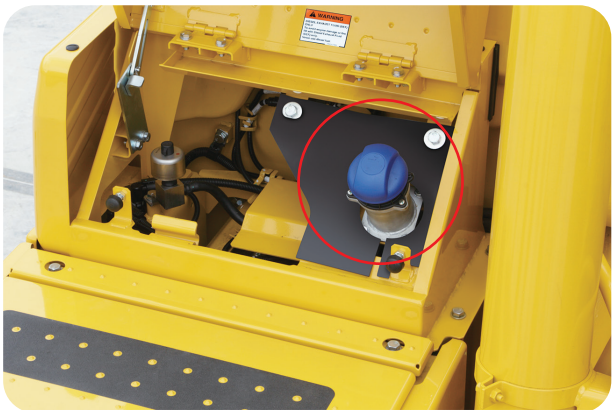
Engine oil and Engine oil filter	every 500 hours
Hydraulic oil	every 5,000 hours
Hydraulic oil filter	every 1,000 hours

Large-capacity air cleaner

Comparable to that of larger machines, the larger air cleaner can extend air cleaner life during long-term operation and helps prevent early clogging, and resulting power loss. A radial seal design improves reliability.

Diesel exhaust fluid (DEF) tank

A large tank volume extends operating time before refilling and is installed on the right front platform for easy access. DEF tank and pump are separated for improved service access.



Maintenance information

"Maintenance time caution lamp" display

When the remaining time to maintenance becomes less than 30 hours*, a maintenance time monitor appears. Pressing the F6 key switches the monitor to the maintenance screen.

* The setting can be changed within the range between 10 and 200 hours.

Maintenance screen

Manual stational regeneration

Under most conditions, active regeneration will occur automatically with no effect on machine operation. In case the operator needs to disable active regeneration or initiate a manual stationary regeneration, this can be easily accomplished through the monitor panel. A soot level indicator is displayed to show how much soot is trapped in the KDPF.

Soot level indicator

Aftertreatment device regeneration screen

Supports the DEF level and refill timing

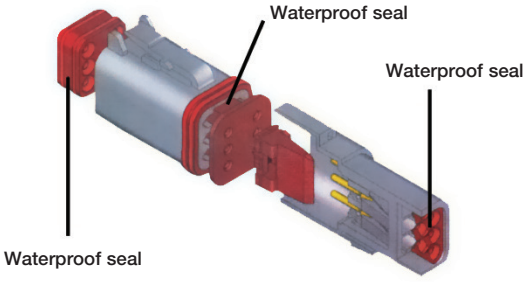
The DEF level gauge is displayed continuously on the right side of the monitor screen. In addition, when DEF level is low, DEF low-level guidance messages appear in pop-up displays to inform the operator in real time.

DEF level gauge

DEF low-level guidance

DT-type connectors

Sealed DT-type electrical connectors provide high reliability, water and dust resistance.



Komatsu parts and service support

Komatsu Care

*The PC290LC/LCi-11 comes standard with complimentary factory-scheduled maintenance for the first three years or 2,000 hours, whichever occurs first.

Planned maintenance intervals at:

500/1,000/1,500/2,000-hour intervals. (250-hr. initial interval for some products) complimentary maintenance interval includes: replacement of oils and fluid filters with genuine Komatsu parts, 50-point inspection, Komatsu oil and wear analysis sampling (KOWA)/travel and mileage (distance set by distributor; additional charges may apply)

Benefits of using Komatsu

- Assurance of proper maintenance with OEM parts and service
- Increased uptime and efficiency
- Factory-certified technicians performing work
- Cost of ownership savings
- Transferable upon resale

Complimentary SCR system maintenance

The PC290LC/LCi-11 also includes one factory-suggested service of the selective catalytic reduction (SCR) and diesel exhaust fluid (DEF) system during the first five years or 4,500 hours, whichever occurs first. End user must have an authorized Komatsu distributor perform the SCR maintenance.

Complimentary KDPF exchange

The PC290LC/LCi-11 comes standard with one complimentary Komatsu Diesel Particulate Filter (KDPF) exchange unit for the first five years or 4,500 hours, whichever occurs first. End user must have an authorized Komatsu distributor perform the removal and installation of the KDPF.

Interval PM	500	1,000	1,500	2,000

Komatsu Oil and Wear Analysis (KOWA)

- KOWA detects fuel dilution, coolant leaks and measures wear metals
- Proactively maintain your equipment
- Maximize availability and performance
- Can identify potential problems before they lead to major repairs
- Reduce life cycle cost by extending component life

Komatsu Care — Extended coverage

- Extended coverage can provide peace of mind by protecting customers from unplanned expenses that affect cash flow
- Purchasing extended coverage locks-in the cost of covered parts and labor for the coverage period and helps turn these into fixed costs

Komatsu parts support

- 24/7/365 to fulfill your parts needs
- Nine parts distribution centers strategically located across the United States and Canada
- Distributor network of more than 300 locations across United States and Canada to serve you
- Online part ordering through Komatsu eParts
- Remanufactured components with same-as-new warranties at a significant cost reduction

*Certain exclusions and limitations apply. Refer to the customer certificate for complete program details and eligibility. Komatsu® and Komatsu Care® are registered trademarks of Komatsu Ltd.

Komatsu equipment monitoring

Get the whole story with Komtrax

What

- Komtrax is Komatsu's remote equipment monitoring and management system
- Komtrax continuously monitors and records machine health and operational data
- Information such as fuel consumption, utilization, and a detailed history lowering owning and operating cost

Who

- Komtrax is standard equipment on all Komatsu construction products and operating cost

When

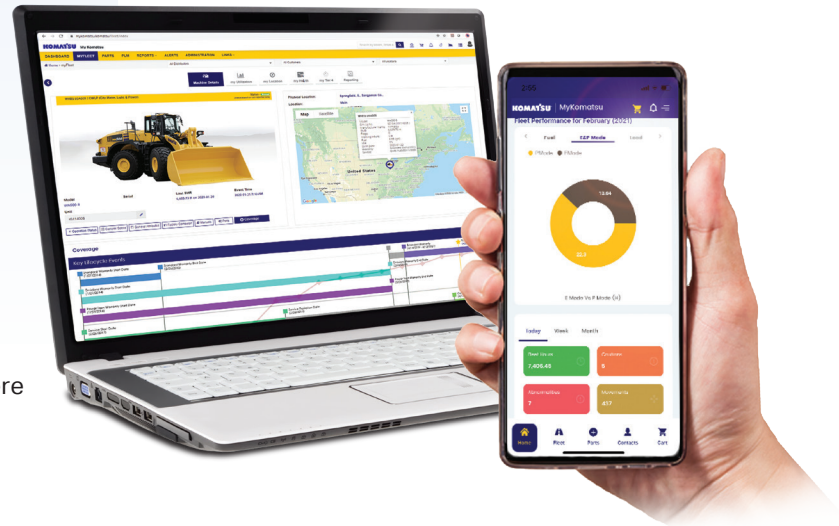
- Know when your machines are running or idling and make decisions that will improve your fleet utilization
- Detailed movement records ensure you know when and where your equipment is moved
- Up to date records allow you to know when maintenance is due and help you plan for future maintenance needs

Where

- Komtrax data can be accessed virtually anywhere through your computer, the web or your smart phone
- Automatic alerts keep fleet managers up to date on the latest machine notifications and operating cost

Why

- Knowledge is power - make informed decisions to manage your fleet better
- Knowing your idle time and fuel consumption will help maximize your machine efficiency
- Take control of your equipment - any time, anywhere



KOMTRAX®
For construction and compact equipment.

KOMTRAX Plus®
For production and mining class machines.

For best semi-automatic machine control performance, observe maximum attachment weights:
- 2,100 kg 4,629 lbs. maximum for 3,200 mm 10'6" standard arm assembly
- 2,060 kg 4,541 lbs. maximum for 3,500 mm 11'6" standard arm assembly

Exceeding recommended attachment weights may negatively impact performance and accuracy of semi-automatic function.

● - Used with material weights up to 3,500 lbs./yd³- Quarry/rock/high abrasion applications
□ - Used with material weights up to 2,500 lbs./yd³ – General construction
○ - Used with material weights up to 3,000 lbs./yd³ – Tough digging applications
⊙ - Used with material weights up to 2,000 lbs./yd³– Light materials applications
X - Not useable

*Asterisk indicates load is limited by hydraulic capacity rather than tipping. Ratings are based on ISO standard No. 10567. Rated load capacity does not exceed 87% of hydraulic lift capacity or 75% of tipping load. Total weight of bucket and/or installed attachments must be deducted from the capacities shown above. Lift capacity chart is based on machine located on a solid, level and uniform surface. Load ratings are at the arm bucket pin location, use of any attachment point in a different location to handle objects could affect excavator lift performance.

*Asterisk indicates load is limited by hydraulic capacity rather than tipping. Ratings are based on ISO standard No. 10567. Rated load capacity does not exceed 87% of hydraulic lift capacity or 75% of tipping load. Total weight of bucket and/or installed attachments must be deducted from the capacities shown above. Lift capacity chart is based on machine located on a solid, level and uniform surface. Load ratings are at the arm bucket pin location, use of any attachment point in a different location to handle objects could affect excavator lift performance.

Equipment

Cab	PC290LC	PC290LCi
ROPS cab (ISO12117-2)	●	●
High back air suspension seat, with heat	●	●
Operator Protective Guard (OPG) Level 1 top guard	●	●
Large LCD high resolution color monitor	●	●
Automatic climate control	●	●
Retractable seat belt (76mm width) with indicator	●	●
Two 12 V accessory outlets	●	●
Rearview mirrors, right hand and left hand side	●	●
Rearview monitoring system (1 camera)	●	●
Travel alarm	●	●
Proportional joystick control levers	○	●
Operator identification system	●	●
Hydraulic lock lever	●	●
Skylight	●	●
Sunvisor	○	○
Rainvisor	○	○
Working lights, two additional cab mounted	○	○
Straight travel pedal	□	□

Engine	PC290LC	PC290LCi
Komatsu SAA6D107E-3 Tier 4 Final	●	●
Dry type air cleaner, double element	●	●
Fuel pre-filter with water separator	●	●
Fuel high efficiency filter	●	●
Automatic engine warm up system	●	●
Programmable auto-idle shut down	●	●
Overheat prevention system	●	●
Turbocharger protection system	●	●

Hydraulic controls	PC290LC	PC290LCi
Pattern change control valve (ISO to BH control)	●	●
Working mode selection system (6 modes)	●	●
Dual pump, closed center load sensing system (CLSS)	●	●
Auto-deceleration system	●	●
Power max system	●	●
Boom and arm holding valves	●	●
Arm quick return valve	●	●
One-way/two-way flow hydraulic control unit Variable flow, return filter, and accumulator	○	-
One-way/two-way flow hydraulic control unit Variable pressure and flow, return filter, and accumulator	-	○

Technology	PC290LC	PC290LCi
Komtrax level 5.0	●	●
intelligent Machine Control	-	●
264 mm (10.4") IMC color monitor with USB	-	●
Multi-band UHF/915SS radio	-	●
Auto grade assist	-	●
Auto stop control	-	●
Minimum distance control	-	●
Bucket angle hold control	-	●
Provision for auto tilt control*	-	●
Komvision (4 camera system)	-	○□
IMU for auto-tilt control	-	□
In field design — 2D simple surface	-	●

Electrical system	PC290LC	PC290LCi
Batteries, large capacity (2 x 12 V)	●	●
Battery master disconnect switch with lockout tagout	●	●
Alternator (90 A, 24 V)	●	●
Starter motor (5.5 kW)	●	●
Secondary engine shut-off switch	●	●
Working lights (1 front RH side/1 boom LH side)	●	●

Booms and arms	PC290LC	PC290LCi
6,150 mm (20'2") boom assembly	●	●
6,150 mm (20'2") boom assembly with +1 attach piping	○	○
3,200 mm (10'6") arm assembly	●	●
3,200 mm (10'6") arm assembly with +1 attach piping	○	○
3,500 mm (11'6") arm assembly	○	○
3,500 mm (11'6") arm assembly with +1 attach piping	○	○
Boom foot, boom nose, and arm end steel castings	●	●

Undercarriage and work equipment	PC290LC	PC290LCi
800 mm (31.5") triple grouser track shoes	●	●
850 mm (33.5") triple grouser track shoes	○	○
700 mm (28") triple grouser track shoes	○	○
8 track/2 carrier rollers (each side)	●	●
Hydraulic track adjusters (each side)	●	●
Track guiding guards, center section (each side)	●	●
Track roller guards, full length (each side)	○	○
Counterweight, 5,200 kg (11,464 lb)	●	●
Counterweight, 5,500 kg (12,125 lb)**	○	-
Object handling H-link	●	●
Tie off points (ISO 14567) — work equipment and upper structure	●	●

Guards and covers	PC290LC	PC290LCi
Revolving frame deck guards	●	●
Revolving frame undercovers — standard	●	●
Track frame swivel guard	●	●
Pump/engine room partition	●	●
Turbocharger exhaust manifold cover	●	●
Dust net for radiator and hydraulic oil cooler	●	●
Slip-resistant foot plates	●	●
Tool-free access to engine and aftertreatment	●	●
Left and right side hand rails	●	●
Cab full front guard, OPG Level 1	○	○
Cab full front guard, OPG Level 2	○	○
Cab top guard, OPG Level 2	○	○
Revolving frame undercovers — heavy duty	○	○

Drive and brake system	PC290LC	PC290LCi
Three speed travel with auto shift	●	●
Double reduction type final drive	●	●
Triple labyrinth final drive seals	●	●

*IMU for auto-tilt control and one-way/two-way flow hydraulic control unit required for operation

**With revolving frame reinforcements, only available with super long fronts

For a complete list of available attachments, please contact your local Komatsu distributor.

Standard equipment	●
Optional equipment	○
Optional (field install)	□
Not applicable	-
