

706/1006NT COMPACT DRILL

NO-TILL: 55-75 HP Min. | Pull-Type

End-wheel versatility.

Land Pride's 706NT and 1006NT End Wheel No-Till Drills are ideal for seeding in a wide variety of applications from pasture renovation to utility reclamation or food plots to food production. They are a great combination between the productivity of a large drill and the versatility of a compact one.

Both models feature large end wheels designed for unmatched ground gauging in rugged terrain. In addition, the in-line end wheels minimize side loading on contours and hills, dramatically extending the life of the no-till openers. Our 706NT comes standard with a 17-bushel main seed box, the 1006NT is 25-bushel. You can also add a small seeds box and either a native grass box or a fertilizer box. These drills also include a 6-position hitch that adjusts to your tractor's hitch height to keep the drill level in planting position. Furthermore, with its high clearance and end wheel design, the 706NT and 1006NT can go virtually anywhere your tractor can pull it, without gouging or bottoming out.
